

Bengier Ülgen Kılıç

Location: Cleveland, OH, USA Phone: +1 (716) 398 8356 E-mail: ulgenklc@gmail.com

LinkedIn: <https://linkedin.com/in/ulgenklc> Github: <https://github.com/ulgenklc> Website: <https://ulgenklc.github.io>

Education

- **Ph.D. in Applied Mathematics** 2023
University at Buffalo, The State University of New York (SUNY), New York, USA
- **B.S. in Mathematics** 2017
Boğaziçi University, Istanbul, Turkey

Work Experience

- **Postdoctoral Research Fellow** 2023 - Present
Biomedical Engineering Department, Lerner Research Institute, Cleveland Clinic, OH, USA
- **Graduate Research Assistant** 2019 - 2023
Department of Mathematics, University at Buffalo, SUNY, NY, USA
- **Graduate Teaching Assistant** 2017 - 2022
Department of Mathematics, University at Buffalo, SUNY, NY, USA
- **Adjunct Instructor** 2019 - 2020
Department of Mathematics, University at Buffalo, SUNY, NY, USA

Publications

- **Kilic, B. Ü.**, Taylor, D. Predicting structure-function interplay from neuronal dynamics on networks, 2024. (in preparation)
- **Kilic, B. Ü.**, Moore, C. H. and Marasco, P. Coordinate-based meta-analytical approach to reveal cortical core-periphery network organization for the sense of body ownership, 2024. (in preparation)
- **Kilic, B. Ü.**, Muldoon, S.F. Skeleton coupling: a novel interlayer mapping of community evolution in temporal networks, Journal of Complex Networks, Volume 12, Issue 2, cnae011, 2024 <https://doi.org/10.1093/comnet/cnae011>
- **Kilic, B. Ü.**, Taylor, D. Simplicial cascades are orchestrated by the multidimensional geometry of neuronal complexes. Communications Physics 5, 278, 2022, <https://doi.org/10.1038/s42005-022-01062-3>.

Talks & Poster Presentations

- Boston University, Dynamical Systems Seminar ([BU-DSS](#)) 2022
(Seminar Talk) Thresholding and multi-body interactions orient cascades in spatially embedded networks.
- Contagion on Complex Social Systems ([CCSS](#)) 2022
(Contributed Talk) A simplicial threshold model for higher-order cascades.
- Network Science Society ([Netsci2022](#)) 2022
(C. T.) Simplicial cascades are orchestrated by the multidimensional geometry of neuronal complexes.
- Northeastern Regional Conference on Complex Systems ([NERCCS](#)) 2022
(C. T.) Geometrical signatures of spreading activity from a neuronal threshold model.
- [Networks2021](#), A joint Sunbelt and NetSci conference 2021
(C. T.) Higher-order flow channels of neuronal avalanches uncovered by topological data analysis of simplicial contagions.
- Northeastern Regional Conference on Complex Systems ([NERCCS](#)) 2021
(C. T.) Characterization of communities in dynamic functional networks.
(C. T.) Geometrical/topological data analyses reveal higher-order flow structures provide flow channels for neuronal avalanches.
- Northeastern Regional Conference on Complex Systems ([NERCCS](#)) 2019
(C. T.) Biomedical image processing via persistent homology.

- Northeastern Regional Conference on Complex Systems ([NERCCS](#)) 2022
(**Poster**) Skeleton coupling: novel method for choosing interlayer edges in temporal networks for dynamic community detection.
- Dynamics Days ([DD](#)) 2022
(**Poster**) Cascades over simplicial complexes preferably follow geometrically reinforced channels.
- Society for Neuroscience ([SFN](#)) 2019
(**Poster**) Cell detection and segmentation via persistent homology.

Professional Development

- Mathematical Approaches for Connectome Analysis workshop, ([IPAM](#), [UCLA](#)) 2024
- Neuromatch Academy Deep Learning summer workshop ([NMA-DL](#)) 2021
- Topological insights in Neuroscience ([MSRI](#)) 2021
- [TopoNets](#), Networks beyond pairwise interactions, Satellite @ Networks 2021 2021
- Biology, Analysis, Geometry, Energies, Links ([bagel19](#)), IMA 2019

Awards and Honors

- Obtained lodging funding from [IPAM](#), [UCLA](#). (\$1500) 2024
- Secured a funding from [CIMPA-AESIM](#) for the organization of DRP-Turkey. (\$4000) 2023
- Obtained travel and lodging grant from University of Colorado at Boulder, [CCSS](#). (\$1000) 2022
- Rewarded by honorable mention of the best poster award, [NERCCS](#). 2022
- Obtained travel and lodging grant from The Institute for Mathematics and Its Applications, [IMA](#). (\$750) 2019
- Contributed to the project ‘Seizure control through state-specific manipulation of cell assemblies’ (NSF SMA-1734795).

Reviews of Journal Papers

- Frontiers in Computational Neuroscience (Review Editor)
- Frontiers in Physics
- Frontiers in Big Data
- Chaos: An Interdisciplinary Journal of Nonlinear Science

Projects

Donu-TDA: Unsupervised software for Donut-like Object segmentation Utilizing Topological Data Analysis

- Built a novel computer vision pipeline employing topological data analysis, raising accuracy by 5% and achieving highest score among 1,500 entries in KAGGLE’s 2018 Data Science Bowl Cell Segmentation competition.
- Integrated a graphical user interface (GUI) for laboratory workflow using tkinter library in Python to correlate analysis results & automation processes, streamlining workflow by 15%.

Temporal network analysis: A novel interlayer mapping of community evolution in temporal networks

- Enhanced scalability and accuracy of dynamic community detection through developing an algorithm, ‘skeleton coupling’ which utilizes data-driven interlayer edge selection, resulting in 20% enhancement of graph clustering accuracy.
- Compiled an open-source application programming interface (API) using ReadtheDocs library in Python for 5 dynamic community detection algorithms utilizing skeleton coupling algorithm improving user experience by 25%.

Neuronal cascades: Computational framework for modeling neuronal dynamics on coupled network systems

- Developed an agent-based model on spatially embedded networks of over 1000 nodes, simulating 100s of diffusion processes via computational methods to replicate real-world events, validating accuracy with 97% correlation rate.
- Provided an open-source codebase in Cython based on provided model to facilitate quantitative research with a well-documented API enabling 40% faster runtime and simplifying code access process by 50%.

Software Expertise

- Python (Numpy, scikit-learn, NetworkX, PyTorch, Tensorflow, PySpark, Pandas, matplotlib, Plotly, ReadTheDocs, Nilearn), SQL, Cython, Matlab (Brainstorm), SLURM, L^AT_EX, Illustrator, MS Office, Github.

Skills

- **Machine learning:** Regression, Clustering, Decision trees, Classification, Dynamic community detection, Dimensional reduction, Network analysis, Time-series analysis, Topological data analysis, Signal-frequency analysis.
- **Neural networks:** Deep Learning, Image Recognition (CNNs), Natural Language Processing (RNNs).
- **High performance computing:** through Ohio Supercomputer Center and Wyoming Supercomputing Center.

Leadership and Organization

- Organizer of Directed Reading Program - Turkey ([DRP-Turkey](#)) 2022 - 2023

Volunteer activity

- Project mentor for '*Critical Thresholds for Epidemics on Networks*' – ([Directed Reading Program, Turkey](#)) 2023
- Project mentor for '*Mathematics of deep learning*' – ([Directed Reading Program, Turkey](#)) 2022
- Project mentor for '*Network analysis for real-world applications*' – ([UB, Directed Reading Program](#)) 2022
- Project mentor for '*Graph theoretical analysis of brain networks*' – ([Directed Reading Program, Turkey](#)) 2021

Languages

- Turkish (Native)
- English (Fluent)
- Greek (Elementary)
